

## Configure Camera and Microphone in macOS

*Applications must be given permission before accessing your devices camera and microphone*

1. Click on the Apple menu, and then System Preferences
2. Choose 'Security and Privacy' and then click on 'Privacy'
3. Select Camera (apply these actions to Microphone as well)
4. Click the checkbox next to the preferred web browser to allow access to the Camera/Microphone. More than one browser may be configured to allow access.

5. If access is turned off, the next time that application wants to use the microphone/camera, it will prompt the user to turn it on again.
